

CUSTOM ASCITES PRODUCTION AND PURIFICATION

SCANTIBODIES, THE RIGHT CHOICE FOR YOUR ASCITES PRODUCTIONS

With over **40 years of experience** in the production and purification of monoclonal antibodies, Scantibodies prides itself in offering our customers not just our services but our expertise. Our knowledgeable staff is always ready to assist our customers if they should start to experience problems with their cell lines, antibody yields or the antibodies themselves.

Boasting over 200,000 mice in our pathogen free mouse vivarium in Tecate, Mexico, Scantibodies produces approximately **2000 L of ascites annually**.

SWITCHING MADE EASY

Switching to Scantibodies for your ascites productions is a simple process, which starts with a **100 mouse** pilot production to determine the yields of your specific cell line in our BALB/c mice. Pricing for the initial pilot production of non-purified ascites and purified ascites is available upon request. There is an additional fee per cell line for comprehensive PCR testing for the presence of murine pathogens which insures that your cell bank vials are free of mycoplasma and various viruses prior to moving your cell line to our pathogen free mouse vivarium.

Once we have established the yields for your cell line, per mg or per mL pricing will be provided for your future orders.

CUSTOM ASCITES PRODUCTION AND PURIFICATION

THE 3 STEPS TO SUCCESS

- 1** Fill out and return our **SLI's Cell Line Questionnaire For Ascites**. Based on the information you provide, we will develop the "*Cell Line Specification Table*" which will be signed by both Scantibodies and your company to be used as the specifications for the production of your **ascites**.
- 2** Work with our **Customer Service Team**. Send at least three working cell bank vials for the initial 100 mouse pilot. SLI can also manufacture master or working cell bank vials from your provided master cell bank for an additional fee. Please note that one of the vials will be consumed for comprehensive PCR testing to confirm the absence of murine pathogens.
- 3** **Delivery of the entire volume produced from the 100 mouse pilot**. Typical production times will range from **3-4 months** from receipt of your order and cell line.
